

APPLICATION INFORMATION

**CONTROLS:**

**LINE IN:**

Female 3-pin XLR-type connector or 3-conductor 1/4" (6.3mm) phone jack accepts signal from low-impedance (0 ohm nominal) line-level source. Input impedance (with 600 ohm load on ISO OUT): approx. 680 ohm.

**ISO OUT:**

Male 3-pin XLR-type connector or 3-conductor 1/4" (6.3mm) phone jack provides floating transformer-isolated low-impedance output to feed line-level input. Recommended load impedance: 600 ohm.

**GND/LIFT:**

GND position connects pin 1 (and jack sleeve) of LINE IN to pin 1 (and jack sleeve) of ISO OUT. LIFT position "floats" ISO OUT. Used to reduce hum and buzz by eliminating ground loops and providing proper grounding for various conditions.

**NOTES:**

- For safety reasons all equipment should be equipped with 3-wire AC power cords and plugged into properly grounded receptacles.**

If all mixers are grounded properly, GND/LIFT switches should be set in the LIFT position for minimum hum and buzz. If this setting does not minimize hum and buzz, it may be indicative of poor grounding quality or improperly wired AC receptacles. Such conditions may be hazardous and should be investigated.

If a GND/LIFT switch seems non-functional, check the wiring of all mic cables plugged into the unit. Cables with a jumper between pin 1 and the connector shell can defeat the GND/LIFT switches.
