

WHAT IS IT?

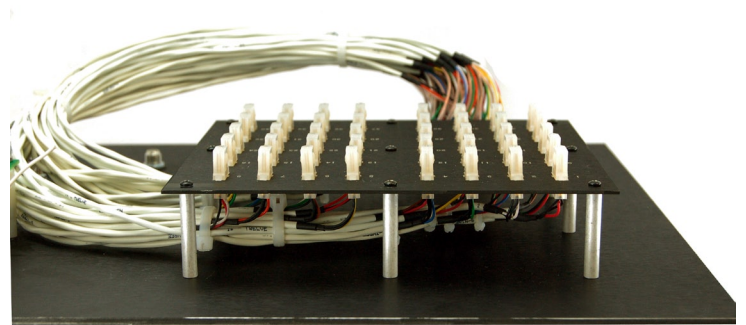

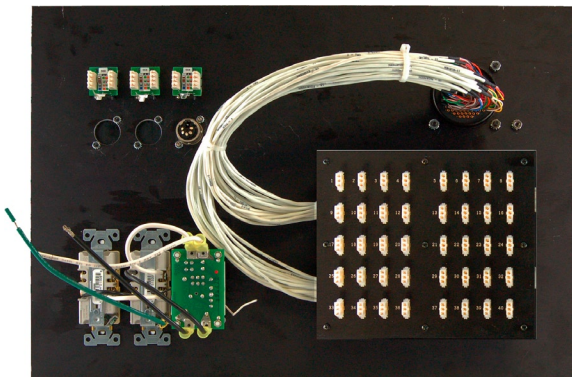

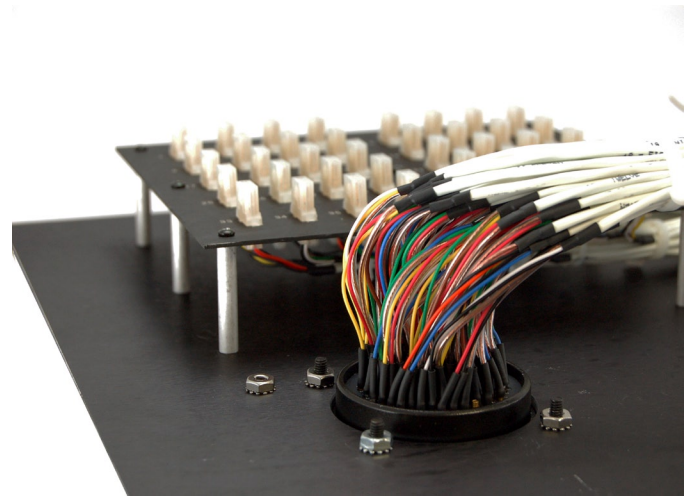

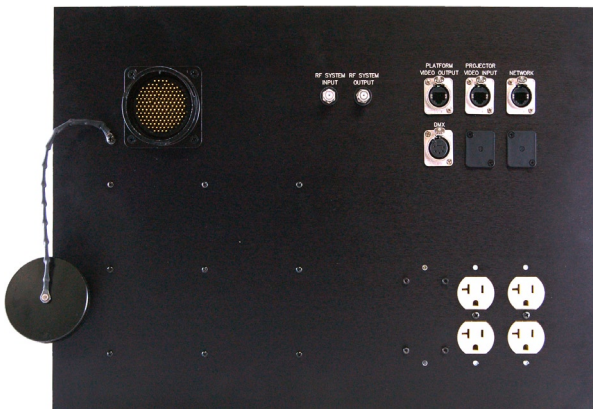

Quick Link System is a method to reliably terminate an A/V panels' connectors to incoming/outgoing wires from the facility WITHOUT the use of solder.

WHAT DOES IT DO?

Using industry-standard EDAC E3 connectors, Pro Co pre-wires the panel and labels all terminations prior to shipping.

HOW DO WE MAKE IT?

In cooperation with the installer, Pro Co pre-cuts the wire runs to length, installs the E3s connectors on the wire, and preps the wire for conduit pull. The installer pulls the wire, connects the EDAC E3 wires to the labeled E3s on the panel.

WHY DOES IT EXIST?

To completely take the time and labor of soldering out of the field, with no degradation of signal, reliability or value to the facility.

WHO WANTS/NEEDS IT?

Anyone installing an audio system.

WHY DO THEY NEED IT VS. WHAT IS ALREADY OUT THERE?

It can save thousands of dollars on install labor costs with no reduction in value. It was designed to eliminate soldering from the field altogether.

WHAT DOES IT COST?

Added costs for the QLS quickly become a non-factor when you take into account how much money you'll save on labor for this part of the installation. In most cases, spend 20%-30% more on the cost of panel and wire, but save up to 50% on the total cost of every panel termination.

WHERE IS IT MADE?

USA

HOW CAN IT COMPETE?

By significantly saving installers time and money, and reducing potential installation errors.
